

AgentOS Platform HQ — Partner and Admin Control Architecture

A domain-agnostic control plane for AI operations, partner-led commerce, managed connectivity, CCTV, and hardware distribution.

1. Platform capabilities

AgentOS concentrates the shared platform capabilities while keeping partner operations tenant-scoped. The platform owns the control plane, policy, settlement, and audit boundaries.

SHARED CAPABILITY

AI Core

Provider: Gemini

- NeuralCube
- Q-NAP
- Sentinel

SHARED CAPABILITY

Billing

- Platform billing
- Partner ledgers
- Revenue share

SHARED CAPABILITY

Hardware and Inventory

- Bulk-buy MikroTik
- Dahua OEM
- LTE SIMs

2. White-label partner layer

Each partner is an isolated tenant with its own regional operating footprint, sites, commercial ledger, and customer relationships. The values below are illustrative planning figures from the supplied architecture.

Partner A

KES 450K

Nairobi · 50 sites

Illustrative monthly value

Partner B

KES 210K

Kisumu · 23 sites

Illustrative monthly value

Partner C

UGX 180M

Kampala · 12 sites

Illustrative monthly value

Partner D

NGN 5M

Lagos · 8 sites

Illustrative monthly value

3. AgentOS control plane

Tenant registry

Owner: AgentOS

Tiered RBAC

Owner: AgentOS

Partner bot lifecycle

Owner: AgentOS

Payment and escrow settlement

Owner: AgentOS

Audit and reconciliation

Owner: AgentOS

4. Value and data flows

5. Operating boundary

AgentOS owns the runtime and policy. Partners operate inside their assigned tenant scope. Admins manage partner lifecycle, roles, approved plans, payment credentials, settlement, regional scope, and auditability. End customers receive the partner-facing services without receiving platform control-plane access.

Partner figures are illustrative planning values supplied by the platform owner; they are not audited financial results.
